Education

Sathyabama Institute of Science and Technology Chennai, Tamil Nadu
Bachelor of Engineering in Computer Science and Engineering *Aug. 2023 – May 2027*
CGPA: 8.09/10

Professional Summary

Computer Science undergraduate with foundational experience in machine learning and full-stack software development. Built and evaluated supervised learning models for satellite image classification using Python, Scikit-learn, NumPy, and Pandas, including data preprocessing, feature extraction, and performance benchmarking across multiple algorithms. Complements this with hands-on production engineering experience — building REST APIs, optimizing databases, and deploying applications — bringing strong programming fundamentals, analytical thinking, and a fast-learning mindset to AI/ML problem-solving.

Experience

Robohatch
Full Stack Developer Intern *Jan 2025 – Jun 2025*

- Engineered and deployed production REST APIs (Node.js, Express.js) and database-driven features for a full-stack e-commerce platform, applying strong analytical and problem-solving skills.
- Optimized MySQL schema design and query performance, working directly with structured data pipelines.
- Translated ambiguous business requirements into technical solutions independently and collaboratively, demonstrating adaptability and self-directed learning.
- Deployed and maintained applications in production environments (Vercel, Railway), gaining practical experience with the full deployment lifecycle.

Projects

Satellite Image Classification 2024

- Built a complete machine learning pipeline to classify satellite imagery into predefined land-cover categories using Python.
- Performed data preprocessing, feature extraction, and dataset preparation with NumPy and Pandas.
- Trained and evaluated multiple supervised learning classification models with Scikit-learn, benchmarking performance across algorithms.
- Assessed model effectiveness using accuracy, precision, recall, and F1-score, iterating to improve results.
- Conducted exploratory data analysis and data visualization to identify patterns and guide feature selection.

CampusCode 2026

- Designing a coding practice platform featuring coding challenges, mock assessments, and interview preparation modules.
- Building REST APIs (Node.js, Express.js) for user authentication, assessment management, and progress tracking.
- Designing scalable MySQL database schemas for storing coding problems, submissions, and performance data.

SQLGuru 2025

- Built an interactive SQL learning and interview-prep platform with practice modules, query execution, and database concept learning.
- Implemented secure authentication and personalized progress tracking; integrated REST APIs and MySQL for managing user activity and performance analytics.

SmartDonum 2025

- Developed a donation management platform connecting donors with NGOs through a streamlined workflow, with database structures for donor, NGO, and donation tracking.

Technical Skills

Languages: Python, JavaScript, SQL, HTML, CSS
Machine Learning / Data: Scikit-learn, NumPy, Pandas, Supervised Learning, Data Preprocessing, Feature Engineering, Model Evaluation, Exploratory Data Analysis, Data Visualization
Frameworks: React.js, Next.js, Node.js, Express.js, Tailwind CSS
Databases: MySQL
Developer Tools: Git, GitHub, VS Code, Vercel, Railway, AWS (Basics)
Concepts: REST APIs, Authentication, Database Design, Responsive Web Design, Machine Learning Fundamentals

Leadership & Activities

- Full Stack Developer Intern at Robohatch, contributing to the development of a production e-commerce platform.
- Actively building software and machine learning projects focused on real-world applications and scalable system design.
- Continuously developing problem-solving and analytical skills through project-based learning.
